

Macromedia Contribute enables anyone to easily update and publish content to existing websites in minutes without knowing HTML, while offering web pros the control they need to lock down site design, layout and code.

Ease-Of-Use

So easy, anyone can use it. Quickly update text and images, add new pages, and publish content to any existing HTML web site as easily as typing a letter. Step by step instructions guide through the process.

Work with your favorite software. Simply cut and paste content directly from Microsoft Word or Excel into your web pages. Create professional content that automatically matches the look and feel of your current site.

Efficiency

Web professionals can now delegate web content updates to content owners, so sites stay more relevant and current.

Save time and money by having content owners update and manage their information.

Contribute is a desktop application that works with any HTML website, set-up is simple—no expensive server component or implementation process is required. Multiple users can work safely on the same website.

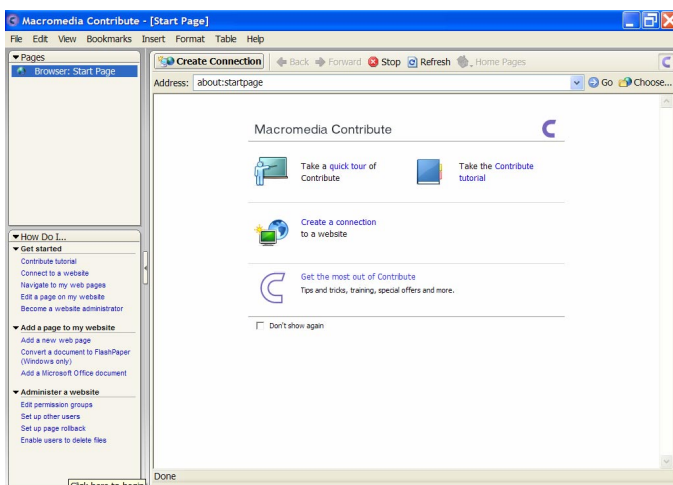

Control

Maintain website integrity with extensive controls to protect standards, functionality, and code.

Contribute locks out any scripts or server controls on pages being edited. Preserve site design standards.

Manage site and user access by controlling who gets to edit which sections of a website and what changes they can make.

Management can identify existing pages to use as templates.

- **Professional Results With No Technical Staff**
- **Allow Your Users To Keep Information Current**
- **Tutorials Guide You Through the Process**

JTechWorks will help you implement Contribute on your existing website or plan a new user designed website.
